

CITRUS GALL WASP SPRAY (CGWS)

CITRUS GALL WASP

This problem pest is native to Australia and has set up home in all states include Melbourne's cooler climate and seems to have adapted quite well.

CGW Spray

Citrus Gall Wasp Spray is a natural insecticide that effectively controls Citrus Gall Wasp. Apply 4+ applications during the spring emergence and in summer for the cooler regions of Australia. 1 application per calendar month during all other periods.

Citrus Gall Wasp Spray is a wettable powder originally used as a protectant against sunburn and heat stress and is applied as a barrier. Results from a trial conducted in 2015-16 showed that spray treatments with CGW Spray reduced the amount of damaging galls by more than 90 per cent. The barrier film also deters egg laying on new shoots which will also reduce the number of new galls the following season.

Application rate Applications are required to be applied to the point of run off (drenched).

Initial application

Using a small container, slowly mix 3 heaped tablespoons of CGW Spray powder per 1 litre of water while constantly stirring to prevent clotting. Add mixed contents into the sprayer bottle, seal then shake vigorously to ensure contents are mixed thoroughly.

Additional applications

Apply 14 to 28 days apart. Use Half Strength (1½ heaped tablespoons) of CGW Spray powder per 1 litre of water. (Follow *mixing method as per initial application instructions above.*) At completion of application, flush sprayers with clean water.

Precautionary Statements

May cause slight eye irritation. Avoid contact with eyes. May cause irritation to the respiratory system. Always wear dust/filtering masks before handling the product.
